

Project Description: New construction of 13 story residential building in Chicago, IL  
Project Budget: \$75,000,000  
Products Utilized: 230,400 sf of PROBoard™ 24 and 768 Rolls of KTape™  
Floor Surface: Polished and Sealed Concrete  
Project Length: 6 Months

PROBoard™ 24's Tru-Lay Flat™ sheets made moving and installation much easier and faster. Using the GaffGun™ made installing the 26.2 miles of KTape™ seam tape extremely easy and fast.

After 1 week of use and moving tens of thousands of pounds of drywall and other building materials into position there is no delamination, curling, penetrations or K Tape™ seam tape breakage.

After 2 months of use, the PROBoard™ is covered in dirt, drywall mud and equipment but there is no curling, penetrations, delamination or KTape™ seam tape breakage.

The PROEdge™ shows several impact scuff marks but no penetrations.

After 3 months of use, there is significant debris, drywall mud, impact scuffs and even thick piles of paint over the PROBoard™ but there is no delamination, curling, penetrations or KTape™ seam tape breakage.

After 6 Months

After 6 months of use, it may not look pretty because of all the debris, water stains, drywall mud, paint and impact scuffs covering almost every inch of the PROBoard™ but there were no stains or other damages to the floor beneath.

There is some minor delamination and heavy scuffing of the PROBoard™ as well as some minor KTape™ seam tape breakage but that is to be expected after protecting the job-site surfaces from the 1,000+ different construction trade personnel, the constant repositioning of construction equipment and building materials and the myriad of construction phases over a 6-month period.

***“First project I have ever had with no floor damage repairs to make and I came in more than 20% under budget as well”***
